Peasants Drink Water

September 19th 2013

 Devin Brown

How does this work? We take both versions of the model, and using binary space partitioning, we compute the added, removed, and unchanged parts. This is done using `csgtool`, a C library paired with a Ruby gem via FFI. These pieces are cached and displayed by the 3D viewer we already have, though we color them differently and play with their transparency to help illustrate the changes. If you have any further questions, check out the help article.

Why I'm Obese
